Release Notes

These release notes outline the changes introduced with the ERP/CRM Integrator 7.8.3 release.

This is primarily a release to fix some defects and to introduce some minor improvements, particularly for the configuration of the ERP/CRM Integrator database connection for a JD Edwards system.

Installation Considerations

Installation

Run the Setup program to install. An existing ERP/CRM Integrator install will be upgraded.

Please make a backup of the SafyrSettings.xlsx file before installing, if you have made any changes to the previous ERP/CRM Integrator delivered version. Make sure to merge the changes you have made into the new version.

Preparing the Source System for Extraction

Source system	Preparation
SAP	Install the latest SAP Transport if upgrading from 7.6 or earlier
SAP BW	Install the latest SAP Transport if upgrading from 7.6 or earlier
SAP BW on HANA	Install the latest SAP Transport if upgrading from 7.6 or earlier
Others	No change

Re-extraction from Source System needed

Source system	Extraction
SAP	Not required unless upgrading from 7.6 or earlier
SAP BW	Please make a backup of the SafyrSettings.xlsx file before installing, if you have made any changes to the previous ERP/CRM Integrator delivered version. Make sure to merge the changes you have made into the new version.
Salesforce	No change
Others	No change

ERP/CRM Integrator Repository

All existing repositories will need to be updated if upgrading from a release older than ERP/CRM Integrator 7.7.3. When first opening an existing repository, ERP/CRM Integrator will notify the user that an update to the structure is required. ERP/CRM Integrator will automatically update the database structure.

Export Changes

None

Automation Changes

None

Release Details

Improvements

- SIR-1853 – Improved options for configuring connection to JD Edwards systems where metadata resides in more than one database
- SIR-1950 – SAP Connection options changed to show SAPNWRFC.ini rather than SAPRFC.ini

Defects

- SIR-1931 – Problem with Linux path specification when using the ABAP 'ALL' functions
- SIR-1939 – Error when using IN/NOT IN clause on Advanced Search
- SIR-1941– SAP BW Reusable Query Components can cause a relationship cardinality problem when exporting to Collibra
- SIR-1951 – BW InfoArea Hierarchy nodes can sometimes be duplicated
- SIR-1952 – Lineage display for a BW system can have circular relationships
- SIR-1953 – Lineage display – number of levels supported exceeded
