Release Notes

These release notes outline the changes introduced with the ERP/CRM Integrator 8.0.3 release.

This is primarily a maintenance release, resolving a number of bugs, and with some minor product improvements.

Installation Considerations

Installation

Run the Setup program to install. An existing ERP/CRM Integrator install will be upgraded.

Please make a backup of the SafyrSettings.xlsx file before installing, if you have made any changes to the previous ERP/CRM Integrator delivered version. Make sure to merge the changes you have made into the new version.

Preparing the Source System for Extraction

Source system	Preparation
SAP	Install the latest SAP Transport if upgrading from 7.6 or earlier
SAP BW	Install the latest SAP Transport if upgrading from any 7.x release
SAP BW on HANA	Install the latest SAP Transport
Others	No change

Re-extraction From Source System Needed

Source system	Extraction
SAP	Not required unless upgrading from 7.6 or earlier, but recommended
SAP BW Hana	Re-extract if HANA Calculation Views are required
SAP BW Classic	Not required unless upgrading from 7.9 or earlier, but recommended
Salesforce	Not required, but V61 API is now available with this release
SuccessFactors	Not required unless upgrading from 7.7 or earlier
Others	No change

ERP/CRM Integrator Repository

No change from ERP/CRM Integrator 8.0.

Export Changes

None

Automation Changes

None

Release Details

Improvements

- SIR-2014: Change to allow ERP/CRM Integrator to work with new Collibra licensing model that removes the ability for customers to create Scopes (depending on license tier)

- SIR-2021: Addition of Salesforce V61 support
- SIR-2040: Improved ABAP Function Modules with better syntax

Defects

- SIR-2018: Small memory leak in Subject Area window due to port to Delphi 12
- SIR-2023: 'Based On' lineage not fully working for InfoObjects
- SIR-2024: Extraction of BW Hana Calculation Views fails due to lack of memory allocation
- SIR-2027: SuccessFactors mandatory flag not being interpreted correctly
- SIR-2034: Memory consumption issue when extracting BW Hana Calculation Views and Lineage
- SIR-2035: SAP BW RFC Extraction removing some lines from dat file when field over 256 characters
- SIR-2043: Problem with JD Edwards Oracle timeout with extended Extraction times
- SIR-2044: Hana Calculation Views contain some unreadable JSON files in extract
